

# Quantum Information and Computing

Assignment 4 (due in two weeks)

November 14, 2023

1. **Continuous time-independent Schrödinger Equation** Consider the one dimensional quantum harmonic oscillator defined by the Hamiltonian:

$$H = \hat{p}^2 + \omega^2 \hat{q}^2 \quad (1)$$

- (a) Write a program to compute the first  $k$  eigenvalues  $E_k$  and eigenvectors  $|\Psi_k\rangle$ .
- (b) How would you rate your program in terms of the priorities we introduced in class for good scientific software development (Correctness, Stability, Accurate discretization, Flexibility, Efficiency)?
